## **Major U.S. Nuclear Generation Utility chooses New Dimension Solutions™ for SAP Work Management Prototype**

***New Dimension Solutions, Inc., in partnership with New Millennia LLC, selected for key value proposition and senior expertise in Work Management for generation utilities.***

New York, NY, April 10, 2004— New Dimension Solutions, Inc (NDS) [www.nd-solutions.com](http://www.nd-solutions.com) is the only SAP Partner specialized in SAP-centric EAM/Work Management and best practice in Physical Asset Management and Reliability announced today being selected in partnership with New Millennia LLC. <http://newmillennia.net/> for the design and implementation of an SAP Work Management prototype for a major nuclear generation utility. The selection process was based on team expertise, past experience, value proposition and the ability to complete the project successfully, on-time, on-budget and on-target.

The team, labeled the “NEW” team (**N**uclear **E**xperienced **W**ork management) leveraged on three very successful implementations together as a team in the Nuclear side of the Utilities sector, as well as successful partnership on other utilities and manufacturing engagements, has put forth a significant combination of skills and experience.

Both companies have worked together successfully since 1998 across several industry sectors, providing unparalleled expertise in SAP Plant Maintenance, Work Management, Work Clearance Management, WEC, Service Management and Change Management.

The goal of the SAP Work Management Prototype is to design and build a limited scope integrated Work Management Prototype to demonstrate that an SAP Plant Maintenance system could be created with capabilities needed by a Nuclear facility to replace the existing proprietary legacy system. Key issues being addressed are “ease-of-use” and “business fit” of the mySAP business suite. The NEW team will showcase SAP Work Management integration to the enterprise including Financials, Controlling, Materials Management, Inventory Management, Human Resources and Project Systems. The use of technologies such as SAP Portals and GuiXT will be used to increase usability and ease-of-use for roll-based activities, and SAP BW and Workflow to enhance reporting and communication.

### **About New Dimension Solutions**

NDS is a world leader in the full spectrum of services to manage enterprise assets through their life-cycle. This includes Product Life-cycle Management; Reliability Centered Maintenance (RCM2); Plant Maintenance/Work Management; Service Management; GIS Implementation/Integration; Inspection and Condition Monitoring; Management of Predictive Technologies; Mobile Solutions; MRO Materials Management and more.

### **About New Millennia LLC**

New Millennia LLC (NM), <http://newmillennia.net/>, is a rapidly growing technical and management consultancy founded in 1996. New Millennia has expanded its capabilities beyond an initial change management focus to offer a more complete suite of systems integration and management consulting services related to Enterprise Resource Planning (ERP) implementations, with a particular focus on SAP R/3.
